

# SPRITLE

## ManageEngine

### LET'S TAKE A LOOK!

The projects in which we have implemented & integrated ManageEngine's product, Mobile Device Manager (MDM)

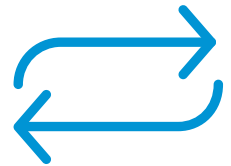

# Mobile Device Manager- Feature Highlights

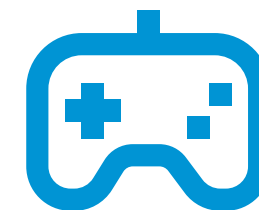

Content Management

Containerization

OS Update Management

Remote Control

Application Management

Security Management

# Mobile Device Manager- Feature Highlights

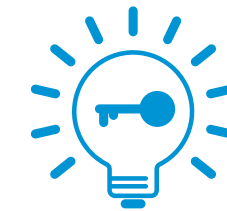

Geofencing

Audit and Reports

Device Onboarding

Asset Management

Profile Management

Email Management

# Smart Fault Management system (FMS) using ManageEngine's MDM in one of Asia's largest Airports

- Manage any devices including Bring your Own Device (BYOD) and Corporate Owned Personally Enabled (COPE).
- Securely share corporate data among the devices without third-party applications.
- Control installations and updates of applications.
- Lock devices when they move out of the geo-fenced airport premises.
- Prevent devices from unauthorized access
- Segregate work apps from personal apps and lock personal apps from accessing corporate data.
- securely share files or information Over The Air (OTA) distribution.
- Wipe corporate data when devices are jailbroken or lost.
- Centralized management and removal of content from managed devices.
- Establish secure connections between devices and networks

# Automated Passenger In-Car Clearance System (APICS) in an immigration checkpoint at the Airport

- Manage all combinations of devices such as Kiosks, Biometric devices used by Officers on duty to perform on-site clearance,
- Ensure Management of all applications to control the usage, install/ uninstalling apps, lock down applications and their usage
- Securely share files or information with officers on the ground to exchange restricted data.
- Centralized management and removal of content from managed devices
- Lock down devices when they device goes out of geo-fencing location, and remotely lock devices to prevent unauthorized access.
