# Mobile Device Management

Our projects using MDM

TAKE A LOOK!

Smart Fault Management system (FMS) using ManageEngine's MDM in one of Asia's largest airports

- Manage any type of devices including Bring your Own Device (BYOD) and Corporate Owned Personally Enabled (COPE) etc.
- Securely share corporate data among the devices without third party applications.
- Control installations and updates of applications.
- Lock devices when they move out of the geo-fenced airport premises.
- Prevent devices from unauthorized access

.....

Automated Passenger In-Car Clearance System (APICS) in an immigration checkpoint at airport

- Segregate work apps from personal apps and lock personal apps form accessing corporate data.
- securely share files or information Over The Air (OTA) distribution.
- Wipe corporate data when devices are jailbroken or lost.
- Centralized management and removal of content from managed devices.
- Establish secure connections between devices and networks

Thank You!
